**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period **will** apply and **will** expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply **will**, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steenwyk et al (GB 2 295 409 A); hereinafter Steenwyk et al. (of Record) in view of Kitson (Pat No. 5,132,624); hereinafter Kitson (of Record)

Steenwyk et al teach a method of making and breaking electrical connections in wireline connecting electrical equipment. A plurality of electrically connectible sections is provided in which each section is provided with a male (12) and a female (11) at opposite ends. The sections are sequentially lowered down into a well to interconnect the male and female members. Holes (19) are provided to allow drilling fluid to escape from the body bore (84) (cf page 8) Kitson teaches a connector (170) having a central bore (180) and electrical contacts (184, 185) circumferentially spaced around the periphery of the central bore (180) (Cf. Col 5) . It would have been obvious to combine the 2 teachings and to provide that pairs of electrical contacts are circumferentially spaced around a central throughbore within a connector rather than what Steenwyk et al teach inasmuch as only ordinary skill would have been necessary to modify the teaching of Steenwyk et al to define the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. J. Arbes whose telephone number is 571-272-4563. The examiner can normally be reached on M, T, R and F from 8 to 6.
